SAAS ANALYTICS IN POWER BI

SaaS Analytics Dashboard Documentation

Page 1: Executive Overview – Business Health Cockpit

Purpose

To provide senior leadership with a 30-second, single-screen understanding of overall business health.

This page is intentionally designed to avoid operational noise and focus only on decision-critical signals.

SaaS Analytics Dashboard Documentation

Primary Business Problems Addressed

1. Leadership lacks a single source of truth for revenue and customer health
2. Revenue growth is visible, but the drivers of change are unclear
3. Executives need a board-ready snapshot, not a detailed analysis

What This Page Solves

- Converts raw subscription and account data into executive-level KPIs
- Separates growth quality from vanity metrics
- Allows leadership to instantly assess:
 - Is the business growing?
 - Is churn under control?
 - Is revenue predictable?

Key Insights Delivered

- Total ARR & MRR show the current revenue scale
- Net Revenue Growth % highlights momentum, not just totals
- Active vs Churned Accounts reveals customer base stability
- Net MRR Waterfall explains why revenue changed, not just that it changed
- Revenue by Country surfaces geographic concentration risk

Decision Impact

- Enables the CEO and founders to:
 - Communicate confidently with investors and board members
 - Detect early warning signs of revenue leakage
 - Prioritize which areas need deeper investigation in downstream pages

Why This Page Is Enterprise-Correct

- Uses filtered, clean metrics only (active subscriptions, non-trial accounts)
- Avoids mixing operational data with strategic KPIs
- Designed for consumption speed, not exploration

Page 2: Revenue & Subscription Intelligence (Finance View)

Purpose

To help finance leadership understand revenue composition, predictability, and leakage.

This page answers how revenue is built, not just how much exists.

Primary Business Problems Addressed

1. Revenue totals exist, but drivers of ARR and MRR are unclear
2. Finance teams cannot easily assess revenue stability
3. The billing structure's impact on cash flow is not visible

What This Page Solves

- Breaks revenue into plans, billing cycles, and movements
- Distinguishes gross revenue from net retained revenue
- Highlights structural risks such as short billing cycles or heavy discounting

Key Insights Delivered

- MRR by Plan Tier shows which offerings actually fund the business
- ARR YoY trend validates long-term revenue sustainability
- Revenue Waterfall exposes:
 - New revenue vs expansion
 - Revenue lost to churn or contraction
- Billing Cycle Distribution supports cashflow forecasting and finance planning

Decision Impact

- Helps CFO and finance teams:
 - Forecast revenue more accurately
 - Identify over-reliance on short-term billing
 - Assess pricing and packaging effectiveness

Why This Page Is Enterprise-Correct

- Separates finance logic from product or support noise
- Focuses on predictability, not just growth
- Designed to support forecasting and planning conversations

To evaluate growth efficiency and customer quality, not just customer volume.

This page answers whether growth is healthy and sustainable.

Primary Business Problems Addressed

1. New customer growth is visible, but retention quality is unknown
2. Teams cannot tell which cohorts perform better over time
3. Trial and activation effectiveness is unclear

- Tracks new account creation trends
- Measures how well customers activate and convert
- Reveals retention decay patterns through cohort analysis

- Signup Trend shows demand momentum
- Trial → Paid Conversion evaluates acquisition efficiency
- Cohort Retention Matrix reveals:
 - Which signup months retain best
 - How fast customers drop off after onboarding
- Identifies whether churn happens early or late in the lifecycle

Decision Impact

- Enables growth and strategy teams to:
 - Improve onboarding and activation flows
 - Optimize acquisition investment
 - Focus on high-quality cohorts instead of raw volume

Why This Page Is Enterprise-Correct

- Uses cohort-based thinking instead of averages
- Avoids marketing vanity metrics
- Aligns growth reporting with long-term retention outcomes

Page 4: Churn & Retention Intelligence

Purpose

To explain why churn happens and identify where intervention can reduce revenue loss.

This is the most strategically important page in the entire dashboard.

Primary Business Problems Addressed

1. Churn is visible, but root causes are unknown
2. Teams cannot link churn to behavior or experience
3. Leadership needs actionable churn signals, not post-mortems

What This Page Solves

- Quantifies logo churn and revenue churn
- Breaks churn down by plan and industry
- Connects churn with support interaction intensity

Key Insights Delivered

- Churn Trend shows whether retention is improving or worsening
- Churn by Plan / Industry reveals structural churn risk

Decision Impact

- Enables leadership to:
 - Identify at-risk customer segments
 - Prioritize retention initiatives
 - Align product, support, and success teams around churn reduction

Why This Page Is Enterprise-Correct

- Focuses on correlation and risk, not blame
- Designed for proactive decision-making

This Power BI project demonstrates a structured, enterprise-grade SaaS analytics approach, covering:

- Executive health monitoring
- Revenue predictability and finance intelligence
- Cohort-based growth evaluation
- Behavior-driven churn analysis

Each page is:

- Purpose-driven
- Role-aligned
- Built strictly within the limits of available data
- Documented with real business intent

This is not a visualization exercise — it is a decision-support system.
